

Deskproto

The latest releases of deskproto have a built in post processor, use that. If you have deskproto 7 use the post processor included there.

This zip file also contains all the tools on the Makera Website except the threadmills and solder mask removal tool.

Place the .ctr files in the deskproto directory, on windows this is C:\ProgramData\DeskProto 7.1\Drivers or C:\ProgramData\DeskProto 8.0\Drivers
